

Development & Evaluation of cleaning formulations

Cleaning Innovation offers innovative development and evaluation of cleaning formulations.

In the food industry effective cleaning is especially important for hygiene reasons. With efficient formulations we can minimize cleaning time, reduce the cost, and reduce environmental impact.

Optimized cleaning efficiency

We develop and optimize cleaning formulations tailored to the type of surface, dirt, and application method. This reduces the time for cleaning and maximizes production time.

Environmentally friendly technology

We help to reformulate cleaning formulations with more environmentally friendly ingredients, such as renewable solvents and surfactants.

Evaluation of independent party

We offer an independent scientific assessment of cleaning efficiency which is valuable for marketing and environmental certifications, for example the Nordic Swan Ecolabel.
