

Cleaning Innovation - Smart for the environment and clean!

Cleaning Innovation assists companies to develop and evaluate environmentally smart and efficient methods for cleaning and disinfection in food industry and other areas.

All cleaning is linked to substantial environmental impact. New environmentally friendly solutions are needed to save energy, water, chemicals and time - while still providing a clean result.

Cleaning Innovation is an open and neutral test bed providing independent evaluation of technologies, chemicals, materials, equipment and methods. We work from laboratory to industrial scale.

Cleaning Innovation customers are e.g. hygiene companies, food companies, suppliers/developers of chemicals, equipment or materials in several areas.

Our Services:

- Cleanability testing of processing equipment surfaces
- Solving cleaning problems
- Formulation and evaluation of detergents
- Efficient use of resources for cleaning and washing
- Environmental footprint of cleaning and disinfection
- Safe working environment
- Theoretical and practical cleaning training
